
Subject: Code for triangular diagrams wanted

Hi,

I'm looking for some code to produce triangular diagrams which are common in chemistry and material science.

(These diagrams have three axis forming a triangle. Axis 1 shows the concentration of material 1, axis 2 shows the concentration of material 2 while the third axis shows some other parameter. As all parameters cannot be changed without affecting one another you actually have one independent variable and a result, hence a 2-d-diagram.)

If possible the code should be expandable to three dimensions to show relations as a pyramid.

Thanks for any hints
