Well, I don't know what's wrong with it. (And I see the keyword is now ORIENTATION and there are a LOT more options than there used to be.) It's just that when I use the keyword, no matter what I do, the image is upside down in every application I have on my computer to view TIFF images. Probably it is the fault of my applications, but I notice that when I REVERSE the Y dimension of the data before I write the TIFF image, all is well in all my viewers, including IDL. So that's just what I do.

Cheers,

David
