Hi,

I have the same problem.... I am using Fedora Core 6. Indeed, it was working well until this morning (or a bit earlier, I might not have noticed!), when I did an update of Xorg-X11....

Build Date: 08 April 2007
Build ID: xorg-x11-server 1.1.1-47.8.fc6

Before the update, it was:
Build Date: 28 February 2007
Build ID: xorg-x11-server 1.1.1-47.7.fc6

Does anyone knows how to revert to the previous version? (I already lost too much time trying to figure things out in Linux ... I don't want to fight with this one!)

Jean
