IDL 6.2 on a FC4 (Stentz) box works fine with the above commands.

** Structure !VERSION, 8 tags, length=76, data length=76:

```
ARCH      STRING  'x86'  
OS        STRING  'linux'  
OS_FAMILY STRING  'unix'  
OS_NAME   STRING  'linux'  
RELEASE   STRING  '6.2'  
BUILD_DATE STRING  'Jun 20 2005'  
MEMORY_BITS INT    32  
FILE_OFFSET_BITS  
          INT     64
```

Linux hostname.domain 2.6.11-1.1369_FC4smp #1 SMP

Thu Jun 2 23:08:39 EDT 2005 i686 i686 i386 GNU/Linux

Is it TV which is broken or just graphics in general? Try the command "window" and see if that crashes.

Thanks,

Allan
