Hy

:Code:

device, decompose = 0

TVLCT, newRed, newGreen, newBlue

WINDOW, 0, xSize = x, ySize = y

TVSCL, image, /order

This first part works fine. The problem is below, when I try to write the result image

.....
 , , , , , , , ,

```

.....using write_tif
.....
.....
;;_____TIF
newRed = reform(newRed)
newGreen = reform(newGreen)
newBlue = reform(newBlue)

Write_tiff, 'C:\IDL\tests\mytif.tif', image, $
    RED=newred, GREEN=newgreen, BLUE=newblue
.....
.....
.....I've also tried using write_Jpeg
.....
.....
;_____JPEG
array = bytarr(3,x,y)
array[0,*,*] = newred[image]
array[1,*,*] = newgreen[image]
array[2,*,*] = newblue[image]

Write_jpeg, 'C:\IDL\tests\myimage.jpg', array, TRUE = 1

```

```

.....
.....

```

Does anyone have any idea whats wrong? I'm sure its very easy problem to treat, but I'm stuck on this problem for 1 week.

Thank you
Aleksander
