I try to save an mpeg using the XInteranimate tool

I can see the animation normally..

but when i press "Save MPEG" i get the message:

```
% Loaded DLM: MPEG
%Variable is undefined: RED
%Execution halted at: CW_ANIMATE_EV  452
    /astro/local/lib/idl/lib/canimate.pro
%      WIDGET_PROCESS_EVENTS
%      $MAIN$
```

Is it possible to fix this by running

the appropriate routine before i press "Save MPEG" ?
