Subject: mpfit: meaning of status flag

Hi,

I'm using mpfit (actually mpfitfun) to do some fitting. Even though the fit seems to converge properly, for all fits I get the message: improper input perameters. Is this a problem? I must admit that I thoughly abuse the X variable, to pass some extra information around, but as far as I know, mpfit does not touch this variable. On the other hand, looking at the list of possible status values, I wouldn't know exactly what's good, and what isn't.

Maarten
