Hi there,

why does

```
print, stregex('[', '[\'])
```

work, i.e. produce 0, whereas

```
print, stregex(']', '[\'])
```

prints -1?

```
print, stregex(']', '\'])
```

works (i.e. prints 0).

```
print, !version
```

```
{ x86 linux unix linux 6.2 Jun 20 2005    32    64}
```

Cheers

Lasse
