I for one really like it! I'm already making up a wish list of new features :) Number one on that list is making it available for IDL 6.2 users (I have access to one machine running IDL 6.3, but my own machines are stuck on 6.2 :( - it's a long story). I can think think of a lot of uses for it, and it's actually made me wonder why someone hadn't thought of it before :)

Jeff
