
Subject: Artifactual Wall with ISURFACE

I am using IDL 6.2 on Windows XP 5.1 (Service Pack 2).

I try to render a depth cue map image (consisting of pixels with different gray values) using

`iview,imagedata`

where imagedata is a 2D array of gray (or z-axis) values. The result looks OK except there is a (pixel wide) wall along $x=0$. If I adjust the range so x is in the $[1, \text{Width}]$ range, the wall moves to $x=1$. Regardless of what I set the x range to be, I cannot get rid of this wall. It is not in the data for $x=0$ but looks it has some sort of contour that may be the profile at $x=\text{Width}-1$ (where the heights are supposed to be higher than those at $x=0$).

I would be most grateful if someone could tell me how to get rid of this wall.

Many thanks in advance,
Peter.
