Subject: Q: Getting the position of the last character printed by xyouts Posted by Christian Oehreneder on Thu, 21 Dec 1995 08:00:00 GMT View Forum Message <> Reply to Message

Schalom!

I'd like to get the position of the last character printed by xyouts or disp_txt. It should somehow be possible because xyouts appends new text to the old when called without position-arguments.

Can anyone help. Thanks in advance!

Ciao Christian
