Dear All,

As I am using the IDL export bridge for the COM connectivity of IDL. I am using hello world program given in help. When ever I am building the application IDL prompts error that devenv not set in path. unable to compile.

I have tried to set the VC++ path in PATH environment variable. but still I am facing the the same problem

If any body has used this feature kindly let me know which path i need to set.

I am using IDL 6.4 and Windows XP and Microsoft visual studio .net 2005 as development enviroment.
