This one im sure is simple.. but I cant figure it out or find anything on it...

Lets say I have this code:

```
OPENW, 1, 'data.par'
```

```
WRITEU, 1, 'more text = '
```

```
WRITEU, 1, *info.M[1]
```

```
WRITEU, 1, 'more text= '
```

```
WRITEU, 1, *info.M[2]
```

```
POINT_LUN, 1, 0
```

```
CLOSE, 1
```

How would I pring a newline in the output between the two outputs? It all comes out as one line. Sorry, im a hack haha.
