Subject: Simple output question Posted by ryanselk on Mon, 04 Jun 2007 19:08:45 GMT View Forum Message <> Reply to Message

This one im sure is simple.. but I cant figure it out or find anything on it...

Lets say I have this code:

OPENW, 1, 'data.par'

WRITEU, 1, 'more text = 'WRITEU, 1, *info.M[1]

WRITEU, 1, 'more text= 'WRITEU, 1, *info.M[2]

POINT_LUN, 1, 0 CLOSE, 1

How would I pring a newline in the output between the two outputs? It all comes out as one line. Sorry, im a hack haha.
