Hi All,

I face the following situation: I'd like to do some online data processing (i.e. during measurements) using IDL. However the data is directly zipped by the acquisition system. Is it possible to read and search (like `file_search`) in a zip archive without spawning `unzip` and extract everything? Windows explorer does it, so it must be possible...

I remember a similar question beeing posted here, but I couldn't find it.

Thanks
