Subject: make_scalar?

Is there an equivalent of make_array that will create a scalar variable, of a type only specified at runtime? Of course I can just create an array and then truncate it to a scalar, v = (make_array(1,type=typecode))[0] but that seems kind of convoluted. I searched around a bit and didn't find anything, but perhaps I'm missing something obvious. I do that from time to time. :-)
