Subject: Cannot install ENVI 4.3 on Ubuntu Linux 7.04 (x86_64)

Hi,

I've posted on the ITT user forum, but thought I would try here as
well.

I'm having difficulty installing ENVI 4.3 on Ubuntu 7.04 (x86_64). I
can run the installer, accept the license, and choose the options to
install, and get past the installation summary. After that, I get an
immediate error:

  /usr/local/rsi/idl_6.3/bin/post_unpack was not found. There may be
errors setting up the product environment.

This is followed by a number of other errors stating that various
scripts were not found or files were not found so no links were
created.

/usr/local/rsi exists but is empty. Is there any good reason why the
files might not be copied and unpacked, and is there any way
(logging?) to try to figure out what's happening?

Thanks!

  Kevin
