Hi IDL gurus,

A simple question which is providing me headache.

I have, say, $x = [-6, -4, 1, 5, 7]$
and $y = [5, 4, 3, 4, 5]$

now I wish to plot x and y in IPLOT in such a way that on the x -axis only the x values are shown. Without any additional ticks. Hereby, the outer values should not be at the very end of the plot, but rather a bit inside.

Somebody can help me out?

greetzz, Joe
