Subject: Data to Device coordinates in Objects Posted by Gaurav on Mon, 18 Jun 2007 10:13:28 GMT View Forum Message <> Reply to Message

Hi Folks, I must be missing out something very fundamental-please bail me out. What I want to do is to get the device coordinates of a particular lat/lon value of a spherical object that is displayed in a object window concocted out of a Draw Widget. None of the procedures like COORD_CONV, CV_COORD etc. seem to be appropriate.

Cheers!
