
Subject: defining a data structure

Hello there,

I'm just starting to dive into IDL objects. As objects are based upon a certain struct, I need to define them beforehand. Unfortunately I fail to figure out how to put a structure definition into a file such that it is automatically found when calling the corresponding object creation routine.

Could anyone please point me out how the myobjectstruct__define.pro has to look like in order for it being recognized? Just putting in the structure's definition doesn't work as well as writing the whole thing as a procedure or function.

Best regards,

Ingo
