Well, shortcuts to what? And where are they "not" going? Shortcuts are meant to go somewhere, right? :) Well, if you wrote a script that runs under windoze, do you expect it to be cross-platform compatible?! The conventions (drives) and the slashes (/ vs. \) are all different, so will be the "locations (paths)" where they are installed (/usr/local/rsi in GNU/Linux and "I don't know where" in windows).

In short, reading your post, it is not clear what you want to tell us..
