4.0.1 for Solaris 2 works under 2.5. I haven't exercised it much, but
so far nothing has fallen flat.

Sun would probably consider it a big problem if it didn't work. In
fact, our local technical rep told us that the binary compatibility
for 4.1.X binaries was good enough that Sun was offering a reward to
field engineers who found a 4.1.X program that didn't run under 2.5.
I just tried IDL 4.0.1 for 4.1.X, and `_it_` works under 2.5.
