Like this (similar for X and Y, if you pass them into iSurface):

```
IDL> isurface, dist(20)
IDL> id = itGetCurrent(tool=oTool)
IDL> idSurface = oTool->findIdentifiers('*surface', /visualizations)
IDL> oSurface = oTool->getByIdentifier(idSurface)
IDL> oDataZ = oSurface->getParameter('Z')
IDL> ok = oDataZ->getData(z)
IDL> help, z
Z          FLOAT   = Array[20, 20]
IDL> shade_surf, z
```

Mike
