Subject: How to have 4 plots of same size on a page?
Posted by paradis on Thu, 14 Dec 1995 08:00:00 GMT

I'm trying to print a page with four plots on it, with set_plot, 'ps' and Device,/Landscape, in pv-wave.

The problem I got is that the 2 top plots are taller than the 2 on the bottom. I tried to reach the same size with XMargin, Ymargin with the command plot, also tried to adjust Ysize, Xsize, Yoffset, Xoffset with Device. Is there something else I can do or are there specific limits to have 4 graphics on a same page? (I also have a Title for the page)

(note: Yoffset and Xoffset, in landscape, seems to go from the right-bottom corner to the left-top corner; is it normal ?)

Any help would be gladly appreciated!
(please answer by email)
