Subject: segmentation fault error in IDL

Hi,

I am getting a segmentation fault error when I restore a .sav file after SSH into a server. I basically do the following:

SSH to server

type 'IDL'

type 'restore something.sav'

type 'something'

This brings up a GUI (or was in the past). Everything was working fine for a few weeks and now I get this error and IDL automatically exits. I didn't do anything to the .sav file (and don't know what was done by the author to create it). I asked the author, and they said when they run it from my directory, it works fine.

Does anyone know what might have happened and what I might try to fix this?

Thanks,

Howie
