Dear all,

I would like to plot 3 variables in a graph, whereby there is an X-axis (11 elements), a Y-axis (ranging between 0 and 2500) and a Z-variable which is connected to XY and should be seen in the plot whereby it is presented as a dot. The value of Z should be projected by a different color of this dot.

Can somebody help me with this, because I really have no clue how to do this...

Thanks a lot!

Matthias
