
Subject: IDLWAVE Screen Split

Hi JD,

I'd like to have the IDLWAVE shell (Ctrl+C,S) not spit the screen in half, but perhaps in a 2:1 ratio or so. I've scanned the documentation but couldn't find the command to do this. I'm guessing it is either "idlwave-shell-frame-parameters" or "idlwave-shell-mode-hook" but don't know what to do beyond that.

Thanks,

-k.
