Anna, First thing to do is really familiarize yourself with http://dfanning.com/.
Everything in the IDL world is at least mentioned here if not solved
(or so it seems).

Be sure to read carefully "The IDL way" http://www.dfanning.com/documents/tips.html#IDLWAY
These articles will help get you thinking like IDL.

Then from my experience about the only thing that has to be in for
loop is file I/O. Other than that you can almost always get away w/o
them if you are clever enough (I am often not that clever either
however)

I am too busy to take a long whack at your code but it is possible.

Hope this helps,

Brian
