Subject: OS_PickFile and others
Posted by Lars Ketil Heill on Fri, 08 Dec 1995 08:00:00 GMT

I've started using IDL v 4.0.1 for MS Windows, and wonder if anyone know of additional information on functions and procedures that are not documented in the user or reference guides, nor in the online help?

The reason I ask, is that I came across the OS_PickFile function (available only in the Windows and Mac versions, I believe), but could find no mention of it anywhere.

I'd appreciate response by e-mail to heill@mrsun2.mr.sintef.no.

Many thanks in advance!
