Subject: Calculating a mean band
Posted by Julio[1] on Wed, 11 Jul 2007 15:08:22 GMT

Hi there!

Very simple question... I have a multi-band image (36 bands) and I
need to calcultate the average of the bands, pixel by pixel.

If I do that:

average_array=mean(multi_band)

I get a single value, because it doesn't work pixel by pixel. So, how
can I do to make a mean band of all the 36 bands??

Comments welcome.

Best!
Julio
