Hi all,

I am steel in HDF issue and have a new problem here.

I have file like this:

1,272,51941,295
2,272,51941,4405
3,272,51941,172
4,273,51957,4 ....

and I would put lines(row) into string array and write into HDF. I do
that in program like:

for i = 0, n do begin
  line = '' & readf, in, line
  IDofOKspec[i] = line
endfor

and store into HDF like:

hdf_add_sds, 'p.hdf', 'okSpecIDs', IDofOKspec

When reading out HDF I have only first line stored as string. With
help I get:

IDOFOKSPEC   STRING   = '1,272,51941,295'

The question is, is it posible to store string array into HDF at all?

thanks many
o.
