Hi there,

I have a problem with array concatenation. Suppose:

A = bytarr(10, 10)

B = bytar(10, 5)

C=[A,B]

Sure, it doesn't work, because dimensions don't agree. But, I need to join A and B. One possibility is to change the dimensions of array B and fill missing lines with zeros. Is it possible??

comments welcome,

Best,

Julio
