For your info: we had the same problem (also with IDL 6.1) on a box  
running Suse Linux 9.3 (xorg-x11-server-6.8.2-30.12). The solution you  
describe would have worked (I suppose), but we chose to upgrade to IDL  
6.4 instead, which also solved the problem. BTW, this is a known  
issue; I remember seeing other posts in this group regarding the  
matter.

Cheers,  
Timm
