
Subject: Selecting the Location of Contour Labels

I'm making what is a relatively cluttered contour plot. I have three separate sets of contours plus two other shaded regions. I'm choosing which contours to label with `c_labels`, but I was wondering whether there's any way to manipulate the location of a label on an individual contour line.

There's plenty of empty room near the edges of the plot, but IDL is insisting on putting all of my labels in the center. Any suggestions? Thanks.

Cheers,
Josiah
