I thought that the definition of cloning means allocating a new object and copying all fields.

If you don't want to create a complete copy the object then you should consider creating a 'proxy' object which looks up the fields of another object.

Cloning an object:

http://www.dfanning.com/tips/copy_objects.html

Something similar to a proxy object:

<http://www.itvis.com/codebank/search.asp?FID=508>

NB.

I have had some difficulties using STRUCT_ASSIGN on objects, so I usually just use N_TAGS
