
Subject: Randomize array order

Hi everyone!

Anyone know an efficient way to randomize an array (I have a sorted array that I want unsorted). Initially, I tried something like this:

```
array = findgen(1000000)
unsort = array[sort(randomu(seed,1000000))]
```

It works, but sorting on a million elements is rather slow. Anyone know a faster way?
