Note that for array operations, making examples with all zeroes is

likely to result in more confusion than not. Here's a relevant trick

to what I think your question was:

```
a=[[1,2],[3,4],[5,6]]
```

```
; this is one move:
```

```
print, rebin(a, 2, 6)
```

```
> 1 2
```

```
> 1 2
```

```
> 3 4
```

```
> 3 4
```

```
> 5 6
```

```
; this is another
```

```
print, [[a],[a]]
```

```
> 1 2
```

```
> 3 4
```

```
> 5 6
```

```
> 1 2
```

```
> 3 4
```

```
> 5 6
```

Note that your example with all 0's, could be satisfied by either of these very different transforms.

Good luck,

Edward H.
