This is a good easy one and an important trick (way of thinking) to learn.

```
IDL> a=[[1,1],[2,2],[3,3]]
```

```
IDL> print, a
```

```
1    1
2    2
3    3
```

```
IDL> b=[[4,4],[5,5]]
```

```
IDL> print, b
```

```
4    4
5    5
```

```
IDL> c=[[a],[b]]
```

```
IDL> print, c
```

```
1    1
2    2
3    3
4    4
5    5
```

Is this what you wanted?

Cheers,

Brian
