Hello

i have IDL project. It's consists of 14 files with *.pro extension
one source file have line

```
RESTORE, 'D:\IDL\GEOPROJECT\Templates.sav'
```

so i pack project to save file (geoproject.sav). Total, my project
have 2 sav files

for ENVI path will change. How define path for Templates.sav from
other sav file in this case (if path would be change) ?

I try put their in same directory, but IDL says 'file not found'
