
Subject: question regarding 3d plotting

Hopefully this will be an easy question for the users here to answer. When plotting in 2 dimensions, one uses the "plot" command and then "oplot" for putting additional lines on a graph. For plotting in 3d, it seems like plot_3dbox is the way to go, but how do I overplot additional lines? The oplot command only works in 2 dimensions, and I can't find something along the lines of "oplot_3d" in the idl library.

I'd appreciate any help with this problem,

-Jeff
