Hi everyone,
I'm trying to solve a linear equation system of the type $Ax=b$ with IDL
by using the procedure LA_SVD or SVDC. When A is a small array the
result is always zero. What doesn't really make sense. When I attempt to
use big arrays (512x512) for A, I get the following error message:
Unable to allocate memory:to make array.
I tried to use the TEMPORARY function, but it didn't help. Can someone
give me an advice.
Thank you
