David,

I'm not a native English speaker and I cannot quite understand what you mean in the reply. But I can sense that maybe you thought me as a bad learner.

I'm a beginner of IDL, and I began to learn it by myself about two weeks ago. With a brief guide from the web, I can write some useful programs for my study now. I think it is great for me because I have to handle both the IDL and the English within such a short time. There is no newsgroup in my own language and few people around me are using IDL. So when I come across questions, I search on the web. As I'm not sure what kind of keywords I should use for the search, I used both 'tm_test' and 'loop'. So far, I have not found my answer so far.

Maybe you think I'm silly or lazy, but I DO did my effort to learn IDL and tried not to bother others with simple questions. This is my first post on this newsgroup. No matter what you think of me, I'll keep searching for the answers.

Lin
