Subject: TIFF Data formats Posted by Pestro on Wed, 05 Sep 2007 14:31:05 GMT View Forum Message <> Reply to Message

Dear All,

I have to convert several thousand(!) ENVI files to LZW compressed GeoTIFF's. ENVI outputs GeoTIFF but does not give access to the batch routine and does not offer LZW compression. IDL (write tiff), while giving me a lot of flexibility with the GeoTIFF tags and the compression, does offer only byte, unsigned short&long and float. (Strange enough ENVI can write e.g. signed short and read tiff ingest its correctly to IDL.)

Anyone an idea or a workaround? Can I modify the data type tag in a TIFF file after IDL has written it?

**Thanks** 

Peter
