The thing I repetitively do on Fedora (5/6/, haven't tried direct
graphics on 7 yet):

rpm -e --nodeps libX11.i386
rpm -i libX11-1.0.3-6.fc6.i386.rpm
export MALLOC_CHECK_=0
export LIBGL_ALWAYS_INDIRECT=1

...of course, all of that came from researching a Tech Tip like the
one you referenced above, so if the above doesn't work for you, I'm
not sure what else to suggest (I downloaded the libX11 RPM from
" http://download.fedora.redhat.com/pub/fedora/linux/core/upda tes/6/
i386/libX11-1.0.3-6.fc6.i386.rpm")

Good luck,
-Kevin
