Hello,

I have a .raw image file from a lumenera camera that I am trying to open. It is a 10-bit image (1280x1024). The total bytes is 7864320 (1280x1024x6) (not sure why that is).

I tried using read_binary with data_dims =[1280,1024] but the image is just snowy....not what I expect to see.

Can anyone help me with this?

thanks,

rp!
