
Subject: How to move axis labels on shade_surf?

I want the y-axis label (tick values and ytitle) to be on the right side of the surface plot instead of the left. I know I can move the z-axis by setting that keyword. How do I move the y-axis? I tried using ystyle=4 to suppress the axis and then use the axis command but that doesn't work because when I run axis it thinks it is a 2-d plot. if I add /t3d I get an "AXIS: Illegal 3D transformation" error.

Anyone know how to do this? Feel free to respond to the newsgroup or via email.

Thanks,

-Andy
