I'm mostly fooling around, trying to understand how all
this works. But I wrote a much better Landsat destriping
algorithm than the one that is in ENVI, and I wanted to
see if I could add it to ENVI via a menu selection. I just
got it to work!

Really quite simple once I had a feel for how things
are done. I'm becoming a big fan of ENVI, especially
now that I can add my own code to it. I see my career
taking off again! :-)

Cheers,

David
