Subject: ENVI File Question

Folks,

Sorry for all the ENVI questions, but the documentation is wonderful in that it leaves so much for the imagination to fill out. :-)

Last night, when I left this project, I was reading a GeoTiff file from disk, making a small change in the file, then writing it to disk with `ENVI_WRITE_ENVI_FILE`. One nice, unexpected consequence was that my new file was automatically added to the Available Bands list.

This morning, all I did was change my file selection from `ENVI_PICKFILE` to `ENVI_SELECT`, so that I could get the files from ENVI itself, instead of having to find them on disk. The files still get written correctly to disk, but they are no longer added to my Available Banks list. :-(

Can anyone explain this behavior? Have I missed something in the documentation?

Cheers,

David
