Subject: Re: how to use MIN_CURVE_SURF when CONTOUR
Posted by Tal on Tue, 25 Sep 2007 08:17:07 GMT

Hi Zuoqunjie,

I tried different combinations of this routine with your data.
no success.

however, this could be a bug at the min_curve_surf.pro in the lib
subdirectory of the IDL distribution (see line 310).

This looks to me as the source of the problem as far as i understand,
but does not make much sense. Maybe playing with xgrid, ygrid instead
of xvalues,yvalues will help.

When all else fails try also the ENVI support team
(support@ittvis.com).
I'll be happy to know what the answer was.

Good luck,
Tal
