Hi Group,

I'm trying to make a compound widget replacement for the widget\_slider. I'd like it to be a drop-in replacement, meaning it can be used with no code changes (other than instantiation). The problem is that WIDGET\_CONTROL and WIDGET\_INFO accepts keywords that I cannot seem to access in my CW.

For example, this line of code:

```
minmax = WIDGET_INFO(wSlider, /SLIDER_MIN_MAX)
```

Is there a way to access these keywords through my EVENT\_FUNC, FUNC\_GET\_VALUE, or PRO\_SET\_VALUE defined access points? Or do I have to modify the code that is supposed to use this replacement widget?

Thanks for any tips.

-k.
